Corporate Overview

TILON Technology is a world leading Application Service Provider (ASP) and Server-Based Computing (SBS) business that provides a number of business offerings including: Server-based computing solutions; mobile-based computing solutions; ASP module implementation; ASP architecture solution and consulting; thin network applications; online storage; online ASP services; and total communication services.

Server-based computing can offer higher levels of security because data is stored on one centralized server and accessed as needed by the user as opposed to leaving sensitive data stored on numerous desktops throughout the enterprise. TILON's TusKan 2007 software product enables server-based computing in a secure, easy to use, cost effective manner and includes all the key software applications you need to run your key business operations.
